Patent No. 6564006

GENERAL INFORMATION:
APPLICANT: Shine, Nancy R.
APPLICANT: Crawford, Karen R.
APPLICANT: Eaton, Linda J.
TITLE OF INVENTION: Substrate Peptides and Assays for Detecting and Measuring Proteol);
TITLE OF INVENTION: Activity of Serotype A Neurotoxin from Clostridium botulinum
TILLE OF INVENTION: US/09/976,535A
CURRENT APPLICATION NUMBER: US/09/976,535A
CURRENT FILING DATE: 2001-10-12
SOFTWARE: Patentin version 3.1
SEQ. ID NO 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 49, Application US/08743894B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1, Application US/08743894B

Patent No. 5965699
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: James J. Schmidt
APPLICANT: Green A. Bostian
TITLE OF INVENTION: Assay for the Proteolytic Activity of Serotype A Neurotoxin fr
NUMBER OF SEQUENCES: 56
CORRESPONDENCE ADDRESS:
ADDRESSEE: MCMR-JA Attn:John Moran-Patent Atty
STRET: USA MRMC - 504 Scott Street
CITY: FORT DETRICK
STATE: MARYLAND
COUNTRY: USA

Sequence 18, Application US/08393985
Patent No. 5693476
GENERAL INFORMATION:
APPLICANT: Scheller, Richard H.
TITLE OF INVENTION: Methods and Compositions for Modulation
TITLE OF INVENTION: of Vesicular Release
NUMBER OF SEQUENCES: 35
CORRESPONDENCE ADDRESS:
ADDRESSEE: Dehinger & Associates
STREET: 350 Cambridge Avenue, Suite 250
CITY: Palo Alto
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  100.0%; Score 59; DB 2; Length 116; 100.0%; Pred. -1- FUNCTION: May play an important role in the synaptic function of specific neuronal systems. Associates with proteins involved in vesicle docking and membrane fusion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Coiled coil; Glycoprotein; Multigene family; Repeat; Synaptosome.

DOWAIN 19 81 t-SNARE coiled-coil homology 1.

137 199 t-SNARE coiled-coil homology 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the nerve terminal.
--- TISSUE SPECIFICITY: Neurons of the neocortex, hippocampus, piriform cortex, anterior thalamic nuclei, pontine nuclei, a granule cells of terbellum.
--- SIMILARITY: Belongs to the SNAP-25 family.
--- SIMILARITY: Contains 2 t-SNARE coiled-coil homology domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cys-rich.

Event-Alternative splicing, Named isoforms=2;
Comment=Isoforms differ by the usage of two alternative
homologous exons (5a and 5b) which encode for positions 56 to 94
and differ only in 9 positions out of 39;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SNP25 CHICK STANDARD; PRT; 206 AA.

Synaptosomal-associated protein 25 (SNAP-25) (Synaptosomal-associated 25 kDa protein) (Super protein) (SUP).
Name-SNAP25; Synonyme-SNAP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SUBDIVIT: Part of the SNARE core complex containing SNAP25, VAMP2 and STXIA. This complex binds CPLXI. Interacts with TRIM9, RIMS1 and SNAP25BP. Binds STXBP6. Found in a ternary complex with STXIA and VAMP8 (By similarity).

"Three-dimensional structure of the complexin/SNARE complex."; RIMS1, Neuron 33:397-409(2002).

-!- FUNCTION: t-SNARE involved in the molecular regulation of neurotransmitter release. May play an important role in the neurotransmitter release. May play an important Rosciates with proteins involved in vesicle docking and membrane fusion.

-!- SUBUNIT: Part of the SNARE core complex containing SNAP25, VAMP2 and STX1A. This complex binds CPLX1. Interacts with TRIM9, RIMS1, SNAP25BP and HGS. Binds STXBP6. Found in a ternary complex with Event-Alternative splicing, Named isoforms=2; Comment-Isoforms differ by the usage of two alternative homologous exons (5a and 5b) which encode for positions 56 to and differ only in 9 positions out of 39; MIM; 600322; -.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         neurotransmitter release. May play an important role in the synaptic function of specific neuronal systems. Associates with proteins involved in vesicle docking and membrane fusion. SUBUNIT: Part of the SNARE core complex containing SNAP25, VAMP2 and STXIA. This complex binds CPLXI. Interacts with TRIM9, SNAP2SBP and HGS. Binds STXBP6. Found in a ternary complex with STXIA and VAMP8 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Event=Alternative splicing; Named isoforms=2; Comment=Isoforms differ by the usage of two alternative homologous exons (5a and 5b) which encode for positions 56 to and differ only in 9 positions out of 39;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and protein kinase A.";

Botulinum serotype A/E substrate useful for assaying protease activity of botulinum toxins, comprises donor fluorophore, acceptor and a clostridial toxin recognition sequence that includes a cleavage site.

Disclosure; Page 40; 168pp; English.

The present invention relates to novel clostridium toxin substrates. The invention further relates to botulinum serotype A/E (BoNT/A/E) substrates which comprise a donor fluorophore, an acceptor having an absorbance spectrum overlapping the emission spectrum of the donor fluorophore and a BONT A or BONT/E recognition sequence comprising a cleavage site, where the cleavage site intervenes between the donor fluorophore and acceptor and under the appropriate conditions, the resonance energy transfer is exhibited between the donor and acceptor. Natural targets of clostridium neurotoxins include VAMP (synaptobrevin), SNAP-25 and syntaxin. Sequences of the invention are useful in assaying for the protease activity of any clostridial toxin including botulinum toxins of all serotypes and tetanus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        clostridial substrate with donor fluorophore, acceptor, toxin recognition sequence, under conditions which exhibit resonance energy transfer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Determining clostridial toxin protease activity, by treating sample with
                                                                                     purification
toxins (TeNT) in a sample including bacterial, baculoviral and yeast lysate, raw, cooked or processed foods, beverages, animal feed, soil samples, water samples, cosmetics, tissue samples and beverage or food samples. They are useful to assay a sample from a human or animal, for e.g., exposed to clostridial toxin or having one or more symptoms of a clostridial toxin, to follow activity during production and purification of clostridial toxin, and to assay formulated clostridial toxin products including pharmaceuticals and cosmetics. The present sequence is human SNAP-25 peptide used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides clostridial toxin substrates useful in assaying for the protease activity of any clostridial toxin including toxins of all serotypes as well as tetanus toxins. The present sequence is human SNAP-25 BONT/A (botulinum neurotoxin serotype A) recognition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Clostridial toxin; protease activity; tetanus toxin; botulinum toxin;

The invention relates to a method of determining (M1) clostridial toxin activity, comprising contacting cell with sample comprising clostridial coxin substrate with donor fluorophore (F), acceptor (A) with an absorbance spectrum overlapping emission spectrum of fluorophore clostridial toxin recognition sequence with cleavage site intervening between (F) and (A), where under appropriate conditions resonance cransfer is exhibited between fluorophore and acceptor, exciting the donor fluorophore, and determining resonance energy transfer of the contacted cell relative to a control cell, where a difference in resonance energy transfer of the contacted cell is indicative of clostridial toxin activity. (M1) is useful for determining clostridial toxin activity, where the sample is a crude cell lysate, isolated clostridial toxin, formulated clostridial toxin product, BOTOX or food. (M1) is an automated high-throughput assay. (M1) caduces the need for animal toxicity studies and serves to analyze contacted from a BONTA, BONTA, SONTA, BONTA, BONTA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The invention relates to an enzymatic assay for the quantitation of type CC A botulinum toxin, by determining the proteolytic activity of botulinum coxin type A using fluorescamine detection. Botulinum toxin A has neurotoxin type A using fluorescamine detection. Botulinum toxin A has comen between residues 197-198. The method comprises adding an analogue (e.g. between residues 197-198. The method comprises adding an analogue (e.g. AAY44022-Y44076) of the SNAP25 peptide (AAY44021, amino acids 187-203 of human SNAP25) to a sample containing the botulinum toxin A so that hydrolysis of the peptide is initiated, then stopping hydrolysis of the peptide at different time points, and measuring the amount of hydrolysis at each time point by combining with a label capable of detecting free amino groups resulting from the hydrolysis. The amount of botulinum toxin A present in the sample is determined by comparing measurements with the amount of label produced from a known concentration of toxin measured to a partitions. The method is useful for the quantitation of
                                                                                                                                                                                                                                                                                                                                                       Quantitation of type A botulinum toxin.
                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Col 13-14; 28pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method for determining protease activity of clostridial neurotoxins such as botulinum neurotoxin (BoNT) and tetamus neurotoxin (TeNT). The method involves treating with a sample, in solution phase under conditions suitable for clostridial toxin protease activity, a tagged toxin substrate (e.g. SNAP-25, VAMP, syntaxin) comprising fluorescent protein, first partner of affinity couple and clostridial toxin recognition sequence comprising cleavage site; contacting treated sample with second partner of affinity couple; and assaying presence of fluorescent cleavage product in the treated sample. The present sequence is the human SNAP-25 substrate BONT/A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Determining clostridial toxin protease activity, by treating sample with tagged toxin substrate comprising fluorescent protein, first and second partner of affinity couple and assaying fluorescent cleavage product in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                 Human SNAP-25 substrate BoWT/A recognition sequence, SEQ ID NO: 27.

```
interpressing interpretation to bottlinum serotype A/E (BONT/A/E) substrates which comprise a donor fluorophore, an acceptor having an absorbance spectrum overlapping the emission spectrum of the donor fluorophore and a BoNT A or BONT/E recognition sequence compurising a cleavage site, where the cleavage site intervenes between the donor fluorophore and acceptor and under the appropriate conditions, the resonance energy transfer is exhibited between the donor and acceptor. Natural targets of clostridium neurotoxins include VAMP (synaptobrevin), SNAP-25 and syntaxin. Sequences of the invention are useful in assaying for the protease activity of any clostridial toxin including bacterial, baculoviral and yeast toxins (TeNT) in a sample including bacterial, baculoviral and yeast lysate, raw, cooked or processed foods, beverages, animal feed, soil samples, water samples, cosmedice, tissue samples and beverage or food samples. They are useful to assay a sample from a human or animal, for e.g., exposed to clostridial toxin or having one or more symptoms of a clostridial toxin, to follow activity during production and purification of clostridial toxin and to assay formulated clostridial toxin products including pharmaceuticals and cosmedics. The present sequence is fret substrate peptide used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                              Botulinum serotype A/E substrate useful for assaying protease activity of botulinum toxins, comprises donor fluorophore, acceptor and a clostridial toxin recognition sequence that includes a cleavage site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note= "DABCYL-modified Lysine; This residue is given as
Xaa in the sequence shown as SEQ ID NO: 94 in the

The present invention relates to novel clostridium toxin substrates. The invention further relates to botulinum serotype A/B (BowT/A/B) substrates which comprise a donor fluorophore, an acceptor having an absorbance spectrum overlapping the emission spectrum of the donor fluorophore and spectrum overlapping the emission spectrum of the donor fluorophore and a bowT A or BowT/B recognition sequence comprising a cleavage site, where the cleavage site intervenes between the donor fluorophore and acceptor and under the appropriate conditions, the resonance energy transfer is exhibited between the donor and acceptor. Natural targets of clostridium neurotoxins include VAMP (synaptobrevin), SNAP-25 and syntaxin. Sequences of the invention are useful in assaying for the protease activity of any clostridial toxin including botulinum toxins of all serotypes and tetanus toxins (TeNT) in a sample including botulinum toxins of all serotypes and tetanus coins (TeNT) in a sample including botulinum toxins of all serotypes and tetanus toxins including botulinum toxins of all serotypes and tetanus coins of samples, water samples, cosmetics, tissue samples and beverage or food samples, raw, cooked or processed foods, beverages, animal feed, soil samples, ray are useful to assay a sample from a human or animal, for e.g., exposed to clostridial toxin or having one or more symptoms of a clostridial toxin, to follow activity during production and purification of clostridial toxin and cosmetics. The present sequence is fret including pharmaceuticals and cosmetics. The present sequence is fret substrate peptide used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                    Botulinum serotype A/E substrate useful for assaying protease activity of botulinum toxins, comprises donor fluorophore, acceptor and a clostridial toxin recognition sequence that includes a cleavage site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human, clostridium toxin, protease activity, botulinum toxin, BoNT, TeNT,
tetanus toxin, VAMP, synaptobrevin, SNAP-25, syntaxin, pharmaceutical;
/note= "EDANS-modified Glutamate; C-terminal amide; Thie residue is given as Xaa in the sequence shown as SEQ ID NO: 94 in the sequence listing of the specification"

```
Determining clostridial toxin protease activity, by treating sample with clostridial substrate with donor fluorophore, acceptor, toxin recognition sequence, under conditions which exhibit resonance energy transfer.
                                                                                                                                                                                                                                                                                                                                                                    Determining clostridial toxin protease activity, by treating sample with clostridial substrate with donor fluorophore, acceptor, toxin recognition sequence, under conditions which exhibit resonance energy transfer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides clostridial toxin substrates useful in assaying for the protease activity of any clostridial toxin including toxins of all serotypes as well as tetamus toxins. The present sequence is FRET (flourescence resonance energy transfer) substrate to analyse proteolytic activity of botulinum toxin. This substrate is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Clostridial toxin; protease activity; tetanus toxin; botulinum toxin;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 59; DB 7; Length 16; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABW01730
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  invention further relates to novel closuring most states to the donor insubstaces. The present invention further relates to botulinum serotype A/E (BONN/A/E) substrates which comprise a donor fluorophore, an acceptor having an absorbance spectrum overlapping the emission spectrum of the donor fluorophore and a BONT/E recognition sequence comprising a cleavage site, where the cleavage site intervenes between the donor fluorophore and acceptor and under the appropriate conditions, the resonance energy transfer is exhibited between the donor and acceptor. Natural targets of clostridium neurotoxins include VAMP (Synaptobrevin), SNAP-25 and syntaxin. Sequences of the invention are useful in assaying for the procease activity of any clostridial toxin including botulinum toxins of all serotypes and tetanus toxins (TeNT) in a sample including bacterial, baculoviral and yeast toxins (TeNT) in a sample including bacterial, baculoviral and yeast camples, water samples, cosmetics, tissue samples and beverage or food samples. They are useful to assay a sample from a human or animal, for e.g., exposed to clostridial toxin or having one or more symptoms of a clostridial toxin, to follow activity during production and purification or manner o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                               Botulinum serotype A/B substrate useful for assaying protease activity of botulinum toxins, comprises donor fluorophore, acceptor and a clostridial toxin recognition sequence that includes a cleavage site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             invention relates to novel clostridium toxin substrates. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Clostridial toxin; protease activity; tetanus toxin; botulinum toxin; PRET; flourescence resonance energy transfer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FRST substrate #8 to analyse proteolytic activity of botulinum toxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gарв
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note= "EDANS labelled glutamate; C-terminal amide"

```
Determining clostridial toxin protease activity, by treating sample with clostridial substrate with donor fluorophore, acceptor, toxin recognition sequence, under conditions which exhibit resonance energy transfer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note= "Tetramethylrhodamine labelled lysine; C-terminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides clostridial toxin substrates useful in assaying for the protease activity of any clostridial toxin including toxins of all serotypes as well as tetanus toxins. The present sequence is FRET (flourescence resonance energy transfer) substrate to analyse proteolytic activity of botulnum toxin. This substrate is used in the exemplification of the invention
                                        The present invention provides clostridial toxin substrates useful in assaying for the protease activity of any clostridial toxin including toxins of all serotypes as well as tetanus toxins. The present sequence is human SNAP-25 SONT/A (botulinum neurotoxin serotype A) recognition
                                                                                                                                                                                                                                                                                                                                                                                                                         FRET substrate #5 to analyse proteolytic activity of botulinum toxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Clostridial toxin, protease activity, tetanus toxin, botulinum toxin, FRET; flourescence resonance energy transfer.

The invention relates to a method of determining (M1) clostridial toxin activity, comprising contacting cell with sample comprising clostridial toxin substrate with donor fluorophore (F), acceptor (A) with an absorbance spectrum overlapping emission spectrum of fluorophore constraints resonance clostridial toxin recognition sequence with cleavage site intervening between (F) and (A), where under appropriate conditions resonance created in exhibited between fluorophore and acceptor, exciting the donor fluorophore, and determining resonance energy transfer of the contacted cell relative to a control cell, where a difference in cresonance energy transfer of the contacted cell is indicative of the contacted cell as compared to the control cell is indicative of clostridial toxin activity. (M1) is useful for determining clostridial toxin formulated clostridial toxin cell reduces the need for animal toxicity studies and serves to analyze reduces the need for animal toxicity studies and serves to analyze contacted from a BoNTA, as bonta, solution and protease activity. In the method (M1), the clostridial toxin substrate is a botulinum toxin substrate comprising a BoNTA, BONTA, BONTA, BONTA, BONTA, Cor TENT substrate comprising a BONTA, 
                                                                                                                                                                                                                                                                                                                                                                             clostridial toxin; fluorophore; clostridial toxin product; BOTOX; food.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Determining clostridial toxin activity, comprises contacting cell with sample comprising substrate with donor fluorophore, acceptor and recognition sequence, exciting fluorophore, and determining resonance
                                                                                                                                                                                                                                                                                                                                Botulinum toxin substrate recognition sequence #46.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 67; 188pp; English.

The present invention relates to a method for determining protesse activity of clostridial neurotoxins such as botulinum neurotoxin (BoNT) and tetanus neurotoxin (TeVRT). The method involves treating with a sample, in solution phase under conditions suitable for clostridial toxin protease activity, a tagged toxin substrate (e.g. SNAP-25, VAMP, syntaxin) comprising fluorescent protein, first partner of affinity couple and clostridial toxin recognition sequence comprising cleavage site, contacting treated sample with second partner of affinity couple; and assaying presence of fluorescent cleavage product in the treated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Enzymatic assay; quantitation; type A botulinum neurotoxin; proteolysis; fluorescamine; detection; human; synaptosomal protein; SNAP25;
                                                                                                                                                                                                                                                                                                                                                                                            Determining clostridial toxin protease activity, by treating sample with tagged toxin substrate comprising fluorescent protein, first and second partner of affinity couple and assaying fluorescent cleavage product in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

```
The invention relates to an enzymatic assay for the quantitation of type A botulinum toxin, by determining the proteolytic activity of botulinum coxin the A botulinum toxin by determining the proteolytic activity of botulinum coxin than the neurotransmitter peptide Subplement and a been shown to cleave the synaptosomal neurotransmitter peptide SNAP25. Detween residues 197-198. The method comprises adding an analogue (e.g. MY44022-Y44076) of the SNAP25 peptide (AAY44021, amino acid 187-203 of human SNAP25) to a sample containing the botulinum toxin A so that character time points; and measuring the amount of hydrolysis at each time point by combining with a label capable of detecting free amino groups resulting from the hydrolysis. The amount of botulinum toxin A present in the sample is determined by comparing measured amount of label produced from a known concentration of toxin measured under similar conditions. The method is useful for the quantitation of type A botulinum toxin
                                                                                                                                                                                                                                                                                                                                       Quantitation of type A botulinum toxin.
                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Col 9; 28pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                   (without alignments)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 37, Application US/10880346B
Publication No. US20060024763A1
GENERAL INFORMATION:
APPLICANT: Los Alamos National Laboratory
APPLICANT: Schmidt, Jurgen G., et al.
TITLE OF INVENTION: Mass Spectrometry-Based Methods for Detection and Differentiation
TITLE OF INVENTION: of Botulinum Neurotoxins
FILE REPRENCE: S-102,313
CURRENT FILING DATE: 2004-11-03
NUMBER OF SEQ ID NOS: 55
SOFTWARE: PatentIn version 3.2
SEQ ID NO 37
